Radialight

Comfort for your Home

Italian Made

Radialight are an manufacturer of leading electric heaters. All their products are designed and assembled in Italy.

Built using the highest quality electronics to ensuring your living environment is as safe and comfortable as possible.

Dual Heating

To heat your room as comfortable and efficient as possible, Radialight heaters use a combination infrared and natural convection heat.

Infrared

The radiant element emits evenly distributed infrared heat from the front panel. Creating a comfortable warm feeling when near the radiator.

Air

Natural convection heat is also used, to increase the radiator's heat output. This ensures the whole room is heated.

The combination of convection and infrared heating technologies, means that the heater delivers rapid warm up times and long lasting, energy efficient consumption.

WiFi

In built WiFi, the heater connects directly to your router, without purchasing additional Hubs or gateways. Making the connection process quick and pain free.

Once the heater is connected, you'll have intrinsic control. From the Radialight APP, you'll be able to control your single heater or whole Radialight system from anywhere in the world!

Can an be fully operated from the onboard control panel. So you don't loose out on functionality if there's no WiFi network available.

Thermostat and Timer

7 day 24 hour timer, so you can programme your heating around your lifestyle.

There are 3 heating modes to pick from: Comfort, Reduced and Anti-frost. The temperature for Comfort and Reduced can be set to any tempature you need.

Then apply the modes throughout the week for complete time and temperature control.

Smart Zones

Each heater can be named to be easily recognisable.

Control a single heater or group several into a "zone". Zones let you control each room independently. For example, the bedroom and living room can be completely different temperatures and heated at different times.

Smart Energy

To keep on top of energy bills, Radialight have an inbuilt energy meter, which records how much energy the radiator is using. On the this will calculate how much money the radiator is costing to operate.

Also from the heater's display, the "Behavioural Indicator" and "Power check Function" let you constantly keep an eye on the heaters energy consumption.

The Radialight ICON epitomises modern Italian design and state of the art heating technology.

Featuring clean cut, slimline styling and intelligent room controls, this heater looks great in any environment! With an IP24 splash-proof body, the ICON is perfect for any room of the house.

Equipped with the latest technology in the heating industry, lowering energy consumption and costs. The ICON will keep you comfortable and in control of your heating.

With an IP24 splash-proof body and super-quiet operation, this wall-mounted electric radiator is perfect for any area of the house. Whether your heating a bedroom, kitchen, bathroom or living room, the Klima will keep you warm and cosy.

Intelligent Energy Consumption

To ensure maximum efficiency, the KLIMA's Intelligent Management system optimises the heater's energy consumption. As the room approaches the set temperature, the power management system is activated, reducing the heater's consumption. Helping to maintain a constantly comfortable room temperature while reducing wasted energy.

WiFi or Manual Control

The KLIMA is available as WiFi and Non WiFi option.

On the non WiFi model, the heater is only operated using the control panel on the front

With the WiFi model, control your heating with a smartphone or tablet. From your smart device, you'll have access to the heater's features (such as timer, thermostat and energy meter) from anywhere in the world. So you won't leave the heating on or come home to a cold home again.

The WiFi heater can also be fully operated by the control panel, exactly like the non WiFi model. So your not left in the cold if the WiFi goes offline.
